Tips for Making Your Own Wind Chimes!

Use cans, keys, bottle caps, marker caps or anything else that will make a sound when it is struck, scratched or shaken.

To make a hole in plastic, heat the tip of a needle with a candle. To make a hole in aluminum, use a hammer and a nail. Make sure you have an adult help you with this part!

Use string, wire, lace or ribbon to tie your “chimes” together.

Tie knots on the undersides of your cans when layering so they don’t slide down.
